Seminar 2: Assignment 1 FAQ

Reminder

* Assignment 1 Due: 2017/01/30 @ 23:55

* NEXT MONDAY!!!

Reminder

* Make sure it compiles/runs on the SOCS server!

* It's where we will be doing most of our marking!

* Doesn't compile - doesn't get graded!

"args" command

✤ You may need to modify lex.c

✤ WORD & SPECIAL variables are regex expressions

✤ How do you get word to included spaces & quotes?

Warnings

✣ If the warnings come from the lex.c or lex.yy.c file, it won't be held against you

✣ This is because of differences between versions on your computer/the server/our computers

Background Process (&)

✤ The & operator returns control to the shell, but still creates the process

✤ On a regular shell, you would have a command that would bring that process to the foreground, **not needed** for your shell

✤ **BUT** you must kill these processes when your shell exits, and handle them when they exit
